

ANEMONES

Available October to March - Size 4/+ Bulbs

Galilee Anemones

Ideally suited for greenhouse production in northern growing areas. In comparison to Jerusalem Series, Galilee is more tolerant of lower light levels and cooler temperatures and produces larger flowers. High bud count with thick, strong stems.

Packed in bags of 100

Color	Description
G. Albino	white with light green eye
G. Blue	lavender-blue
G. Bordeaux	deep wine
G. Pastel	mix of soft pinks, reds and blues
G. Pink	pink
G. Red	red
G. White	white with dark eye

Jerusalem Anemones

The classic anemone- Great for outdoor cut flower production and is well suited for warmer growing climates. Flowers are of medium size with sturdy, medium diameter stems. High bud count.

Stem height: 14-16 inches

Packed in bags of 100

Color	Description
J. Blue	lavender-blue
J. Red	classic red
J. Pink	hot pink
J. Red-White	red and white
J. Blue-White	blue and white

Meron Anemones

Well suited for low light and low temperatures in either outdoor or greenhouse production. The Meron Hybrids are superior in stem thickness, flower size, and stem length. Early flowering with long vase life.

Packed in bags of 100

Color	Description
M. Blue	lavender-blue
M. Bordeaux	deep wine
M. Pink	pink

Carmel Anemones

Larger flowers than either the Jerusalem or Galilee series. Slight decrease in number of flowers produced compared to Jerusalem or Meron series due to the very large flowers. The thicker, sturdier stems enhance shippability and extends vase-life.

Packed in bags of 100

Color	Description
C. Albino	white with light green eye
C. Blue	soft lavender
C. Bordeaux	deep wine
C. Pink	pink
C. Red	red, hint of white at center
C. White	white with dark eye

See page 71 for detailed growing instructions

Height Control for Pots

Please see page 85 for detailed information on the use of height control treatments.

CALADIUM

Size #1 - Available 2/1/24 - 7/4/24 - Packed in 25's - Pot tags are available in multiples of 25

Type	Height	White Variety	
Candidum	Fancy Leaf	Medium	white with green netted venation and thin green margin
Fiesta (S) <i>NEW</i>	Fancy Leaf	Short	white with thick red veining at center
Garden White(S)	Fancy Leaf	Tall	(PP20,448) almost pure white, thin green edge, very sun tolerant
White Christmas	Fancy Leaf	Medium	white with wide green veins - star as pink maturing to white color
White Queen (S) <i>NEW</i>	Fancy Leaf	Tall	white with thin red veining at center

Pink Variety			
Carolyn Wharton (S)	Fancy Leaf	Tall	pink with crimson main veins, green mottling
Pink Beauty	Fancy Leaf	Medium	salmon pink leaves with green mottled margin
Seafoam Pink (S)	Fancy Leaf	Tall	light green and pink speckled
Spring Fling (S)	Fancy Leaf	Medium	pink with black veins and stems

Red Variety			
Brandywine	Fancy Leaf	Tall	red with green edged speckles
Freida Hemple	Fancy Leaf	Medium	red with strong green edge
Lava Glow (S)	Fancy Leaf	Medium	(Patent pending) variegated red, darker veining, speckled green edge

Specialty Varieties			
Frog In a Blender (S)	Variegated	Tall	multiple shades of green, speckled
Mint Julep (S)	Variegated	Medium	light green with dark pink veining
Miss Muffet (Dwarf) (S)	Strap Leaf	Short	chartreuse with dark red specks
Strawberry Star (S)	Strap Leaf	Tall	white foliage with green veins and flecked with red PP24,681
Sweetheart (S)	Strap Leaf	Short	bright pink center with green margins

(S) - Sun tolerant

TALL- 18" +, MEDIUM- 12-18", SHORT- 8-12"

Planting Medium/Watering/Fertilizer

IT IS ESSENTIAL TO START AT A SOIL TEMPERATURE OF 78-80°F

Once the ground temperature reaches 70 degrees Fahrenheit, plant the caladium bulb, eyes up, plant #1s 7-8 inches apart and cover with 1 1/2 inches of soil. Planting caladiums more densely will increase the height of the stem. Cooler weather will delay sprouting.

See page 72 for detailed growing instructions

ELEPHANT EARS

Available 3/1/24 - 7/4/24 - Packed in multiples of 5 - Sorry, No Pot Tags Available

Large leaves grow atop 3-7 foot stems. They are suitable for growing in containers and for borders.

	Size	Height	
Regular	11-13"	36-60"	rippled green leaves
(Colocasia Esculenta)	13-15"	36-60"	rippled green leaves
Upright (Odora)	11-13"	48-72"	large, deep green up-right leaves

Planting

Native to tropical countries, elephant ears need a minimum daytime temperature of 70°F. After last frost, plant elephant ears when night temperatures maintain around 60°F.

Watering/Fertilizer

Water and fertilize often. Elephant ears are heavy feeders.

See page 78 for detailed growing instructions

CALLA FOR POT OR CUT - Available Year Round

Size 1 3/4 - 2" - Available January - Packed in 25's - Pot tags by color (no variety listed on tags) are available in multiples of 25

White Variety	
Snow Storm	large white flowers with spotted foliage
Purple Variety	
Dior	dark purple blooms
Outback	royal purple
Red Variety	
Red Charm	ruby red, spotted foliage
Royal Valentine	medium red, spotted foliage
Orange Variety	
Cancun	orange with yellow throat
Pink Variety	
Vermont	dark, dusty pink
Zazu	hot pink blooms with a distinctly wavy shape
Yellow Variety	
Monte Carlo	bright, sunny yellow blooms, spotted foliage
Sun Club	deep yellow blooms with spotted foliage
Specialty Variety	
Dubai Nights	dark blackish-purple blooms with thin white edge
Picasso	lavender purple with cream edge

Storage After Arrival

Unpack and place on ventilated trays at 65° F for a couple of days prior to planting.

Planting Medium/Planting Procedure

Planting medium should be well drained, a pH of 6-6.5 and have good air porosity (optimal at 20% +/- 5%). Avoid excessively wet or dry conditions.

Light

Calla can be exposed to full sunlight. If the temperature in the greenhouse goes over 80° F, some shading is recommended to avoid leafburn.

See page 73 & 74 for detailed growing instructions

CANNA

Available 3/1/24 - 7/4/24 - Size 2/3 eye - Packed in 25's - Tags Available in Multiples of 25

Canna thrive in full sun producing lush green and bronze foliage and bloom in vibrant colors. Canna are sturdy plants and need no staking.

	Ht.	Foliage

TINY TOTS GLADIOLUS (Border Glads, Butterfly Glads)

Size 10/12 cm. - Available 3/1/24 - Packed in 100's - Days to Bloom: 65-75 - Height: 18-30"

These gladiolus are shorter than regular glads with flower stalks that produce more flowers. With the shorter height, this makes them ideal for garden borders as they are less likely to tip - also good for landscapes. Vigorous growers.

Variety	Description
Albus	pure white with sweeps of cream/lemon yellow at center
Atom	fiery red, edged with white
Charm	vivid magenta-rose with softer pink at center
Charming Beauty	soft pink with creamy center
Las Vegas	canary yellow edged with orange-red
Robinetta	bright red with small white accents at center

Acidenthera Muriela

Size 8/+ - Available Mid-February - Packed in 100's

Ideal as a summer cut flower

		Ht.	Hardy Zone	Flower Time
Acidenthera Muriela	Fragrant white flower w/ mahogany eye	30"	7-10	Aug-Sep

CLEMATIS

One Year Old Dormant Clematis - Available 2/1/24 - 7/4/24 - Packed in 10's

Tags Available in Multiples of 10, See page 75 for detailed growing instructions

TREE LILIES

These giant Oriental Trumpet Lilies (also know as Orienpet or Tree Lilies) are a hybrid of the showy Trumpet Lily and the hardy Oriental Lily. The result is a sweetly scented, stunning show of magnificent blooms which attract butterflies. These tree-like lilies are very sturdy and can grow up to 6 feet tall. Ideal for borders or containers. Soil must be well drained.

FRUITS & VEGETABLES

Asparagus Crowns

Size: 1 Year Nr. Crowns - Packed in 50's - Available 2/15/24 - Tags available (25/pk)

Mary Washington One of the most popular varieties grown. Produces an abundance of medium to large purplish tinged, tender and flavorful shoots. Good rust and fusarium resistance.
Jersey Knight - Male Hybrid Best of the Jersey Hybrids. High yield. Produces thick, flavorful spears with purple tips that are both tender and sweet. Fusarium disease tolerant.
Jersey Giant -Male Hybrid Very vigorous with twice the yield of old-fashioned kinds. Resists fusarium, crown rot and rust. Best for fine flavor and the largest succulent spears.
Sweet Purple Unique, beautiful dark purple variety that is sweeter than standard green varieties. Vigorous growth. Can be used either raw or cooked

See page 71 of the Cultural Section for growing information

Horseradish

Packed in 10's - Available March 2024 - Tags Available in Multiples of 10

A hardy variety producing large white roots of superior quality. Prefers rich soil and plenty of moisture

See page 80 of the Cultural Section for growing information

Hops

Packed in 10's - Available March 2024 - Sorry, Tags Not Available

Cascade - one of the most popular varieties, performs well in most climates. Cascade is a dual purpose hop; used both as an aroma hop and a bittering hop. Producing an abundance of cones and trailing vines, florist desire the unique texture that hops adds to floral arrangements.

Katahdin - round, shallow eyes, buff skin, white flesh
Russet - oblong, numerous shallow eyes, white flesh

STRAWBERRY PLANTS - Year Round

See page 88 for detailed growing instructions

Specialty Berries - Available 2/1/24

Packed in 100's, Tags available (25/pack)

Flamingo **NEW**

Produces high yields of unique light pink berries. Highly aromatic and flavorful with a high sugar content, making these berries perfect for snacking, freezing and preserving. Flowering occurs in late spring, reducing the possibility of spring frost damage.

White Carolina

Unique strawberry with a taste that is a cross between a strawberry and a pineapple. The fruit is smaller than a traditional strawberry, but unlike a traditional strawberry, the flesh of a pineberry is white with red seeds. Fruit exposed to direct sun will develop a pink blush. The fruit is very aromatic with a scent that is reminiscent of a pineapple.

Junebearing Varieties - Available 2/1/24

Packed in 100's, Tags available (25/pack), No variety listed on tags

Honeoye

Heavy yields of very large, sweet fruit, and excellent winter tolerance. Popular, versatile variety that works well in the north.

Sequoia

One of the best tasting berries. Fruits like an everbearer under certain conditions. Produces lots of huge, sweet fruit. Works best in California and southern states.

Allstar

Exceptionally large firm fruit that holds its size for entire season. and works well for fresh eating and canning. Resistant to soil fungi. Grows well all over USA.

Chandler

Produces medium to large, semi-early fruits with superior flavor. Very nice, sweet, dessert quality flavor. Performs well all over, but especially well in California and southern and eastern coasts.

Eclair

This "short day" variety has early season productivity of medium-large, wedge-shaped, extremely sweet and fragrant berries, with medium firm flesh. With parent stock consisting of both springbearing and everbearing varieties, it will produce longer into the season than other springbearing varieties.

Everbearing Varieties - Available 2/1/24

Packed in 100's, Tags available (25/pack), No variety listed on tags

Albion

Produces large, firm, conical fruit that is perfect for dessert due to its high sugar content. High yield, bearing fruit throughout the summer months.

Fort Laramie

The smallest of Maxi-cultured Crown-Root starts, Ft Laramie is easily planted into bedding plant packs and also works well in hanging baskets. Three weeks bench-time, works best in colder areas of USA and Canada.

Ozark Beauty

One of the most popular varieties. Sweet, wedge-shaped fruit throughout summer and fall. Excellent for fresh eating and dessert. Works well all over the USA and Canada.

Quinault

A very popular variety for bedding plant packs that sits down tight and is in full blossom in only two to three weeks. Produces large, sweet fruit and works well all over the USA, especially in the Northwest.

Eversweet

Produces large fruits, very sweet wedge-shaped fruits throughout spring, summer, and fall. Holds up well in hot growing conditions. Shows very good results all over the USA.

Seascape

Produces very large, firm, sweet, fruit with a medium to long conical shape. Seascape is a very productive and disease-resistant variety ideal for gardens or containers. This day-neutral performs well in a wide variety of climates from Hawaii to Canada.

Bare Root Hostas Are The Way to Go!

Excerpt from Flower Bulb Research Program Newsletter, dated July 2015, as published by Anthos, Royal Dutch Trade Association for Nurserystock and Flowerbulbs in cooperation with Dr. Bill Miller of Cornell University

In the trade, perennials are mainly propagated from seed, cuttings or division. (Techniques such as tissue culture are really an adaptation of cuttings or division). Growers have the choice of purchasing actively growing plugs or liners, dormant liners, or bare root divisions. The divisions may be domestically produced, or, the focus of this work, as imported bare root divisions (specifically, from The Netherlands).

Over the years, the Flower Bulb Research Pro-gram has done a number of studies with perennials that have addressed specific and important questions in the industry. Perhaps most important was our early work looking at the effect of washing in the Netherlands, and whether or not washing affected regrowth rate and quality.

The results of that work were published in one of the first Research Newsletters, and can be found at

<http://www.flowerbulbs.cornell.edu/newsletter/No. 2 Perennial Regrowth.pdf>

A very important finding of this early work was that the washing process (required by USDA-APHIS to minimize entry of pests and pathogens into the US) does not cause any injury to the bare roots. On a variety of plants, washing 0 to 8 times had no effect on rooting speed and root growth at all.

Secondly, almost as a side project, we showed that a more likely cause of variable growth and slow regrowth of imported bare root perennials was planting depth. Simple message: Deep planting is BAD. This finding contradicted most of the printed cultural guidelines at the time, most of which recommended planting the crowns 1.5-2.5 inches below the soil surface. In fact, the best and most uniform regrowth comes when the crown is planted at the soil surface, in fact, so that the eyes are basically at the soil level once watered in and settled. Growth is much faster and better, as seen in the above newsletter. In fact we developed a pictorial guide about the benefits of "Planting High", which can be downloaded at

<http://www.flowerbulbs.cornell.edu/newsletter/No. 2a Planting Perennials High.pdf>

Bare Root Hostas (cont.)

What we did

Bare roots and dormant liners were received in mid-spring from a commercial source in late spring 2014. The liners were domestically grown and were the same cultivar as the imported, bare root material. Most liners were 36 cells per tray, the bare roots were ("No. 1 divisions"), that is, standard commercial imported material. We planted the material into "3 qt. gallon" black plastic nursery cans using Lambert LM -111 planting mix, which is a fairly coarse, well drained peat and vermiculite-based mix that we have found to be an excellent all purpose mix in our work.

Plants were planted in early April about the same time and grown outdoors in prevailing weather conditions. Final observations were made in early July. One liner or one bare root was used per pot. Liners were planted at the same depth as in the tray, bare roots were planted so the crown was at the soil surface after irrigation, following our "planting high" protocol. Plants received normal commercial care (mainly, liquid fertilization twice a week at 150 ppm N). No pest control was necessary on any plant. We used 10 replicates (liners or bare roots) per species.

Cultivars used were as follows: Hosta 'Blue Angel', Hosta 'Blue Mouse Ears', Hosta 'Earth Angel' and Hosta 'Rainforest Sunrise'.

What we Found

The growth differences were very significant between the liners and bare roots. Growth at the end of the experiment can be seen in the photo of representative plants for the entire group of plants against the black backdrop. It is clear from these results that bare roots provide a superior product, faster, than with liners.

Overall, we can conclude that bare roots are invariably a superior starting material for *Hosta* than liners.

Hosta 'Blue Angel' Left: Liner (plug), Right: Bareroot
